

# HOW TO MAINTAIN YOUR Lapitec® surface

Contract Number:

## Tricks and tips to maintain your new quartz surface

### CONGRATULATIONS ON YOUR PURCHASE !

You have made an excellent choice. The synthetic stone Lapitec® is a very strong and durable product that will please you for many upcoming years. It can be installed indoors as it could also be outdoors. Its fabrication process is unique and revolutionary which makes it nearly imperishable. It resists to scratches, stains and weather conditions.

### FREQUENT QUESTIONS

**Q: Must I apply a sealant on my surface ?**

R: All Lapitec® surfaces are completely non-porous. Which means this product has absolutely no need for a sealant .

**Q: How do I clean my surface?**

R: Use lukewarm water, a soft cloth and dish washing soap. Some of the biggest qualities of Lapitec® stones are that they are completely resistant to stains, mould and that they are antibacterial surfaces. They are perfect while cooking.

**Q: Lapitec® is it heat-resistant ?**

R: By its composition, Lapitec® is unmodifiable and resist perfectly to heat. It is then possible to place very hot surfaces on your counter with no worries.

**Q: May I cut directly on my counter top ?**

R: The solidified texture of Lapitec® makes it more resistant over time. It resist very well to wear and collisions.

**Q: Can some products damage my surface ?**

R: Lapitec® is a extremely strong product. It is not affected by the different weathers, acidity, base or solvents. Furthermore, it is incombustible, can not freeze and is insensible to UV rays. There can not be any discoloration because of the sun.
